Secure Systems & Technologies Unveils Latest TEMPEST Solutions

SST takes the covers off new TEMPEST product for Secure Office Environments

- the All-in-One PC

Gloucester, UK: Specialist defence and security IT manufacturer, Secure Systems & Technologies (SST) has launched its latest secure computing product, designed to meet the most stringent TEMPEST protection level NATO SDIP-27 Level A. The **All-in-One PC** is the latest in a long line of successful TEMPEST solutions from SST, used widely around the world by Government agencies and international organisations.

The SST **All-in-One (PC + Monitor)** incorporates a 22" widescreen, high-resolution display and is designed for near-silent operation. SST's product incorporates a state of the art computing platform within an elegant, ergonomically-designed casing, ideally suited for Embassy and other high level secure office environments. Additional built-in security features can include an integrated token reader for Enhanced Grade encrypted disk or software authentication, eliminating historical issues with trailing wires and lost readers, door open alarms and removable hard drives.

SST also offers a Secure Media Stick option, which is a bespoke USB memory stick designed to withstand conditions from -40° to 100°C. This provides a robust physical interface and factory-programmed unique serial number so that the PC can be locked-down to accept selected devices, or to encrypt all data transfers.

The All-in-One PC + Monitor provides a versatile, elegant and high performance solution that is particularly suited to simplified deployment in space-constrained facilities, where the requirement is for a comprehensively specified, secure system.

About SST

Established in 2002 as the product of two synergistic organisations, Secure Computer Systems Ltd and Secure Systems Production Ltd, SST operates to ISO 9001 standards. Its comprehensive service set includes a dedicated engineering and test division, matched by consultancy and training facilities, majoring on COMSEC and EMSEC requirements. SST's emphasis is on providing state of the art solutions from concept to deployment, with its design and development facilities backed up by a specialist service organisation. Combined with

dynamic Service Partner Agreements, SST maintains full service coverage across the European and NATO theatres.

SST's success is substantially based on its long-standing ability to deliver a complete end-to-end service. This is achieved by working in partnership with its customers, major prime contractors and global IT product leaders - identifying and adapting current technologies, and creating individual solutions that meet a project's stringent requirements for data security. A critical element of SST's philosophy involves managing obsolescence effectively, ensuring that customers receive lifetime product support. SST employs a high percentage of skilled staff comprising Subject Matter Experts, highly qualified consultant engineers, designers and expert technicians, operating from a purpose-built facility on the outskirts of Gloucester.
